

ABSTRACT OF THE DISCLOSURE

A system and method for storing energy during an off-peak period and distributing energy during a peak period in a wholesale energy market. The system has a first energy directing device for directing energy produced in the wholesale energy market during the off-peak period into an energy storage device, and a second energy directing device for directing the energy from said energy storage device into the wholesale energy market during the peak period. Also, a method for creating profit in a wholesale energy market.
